Client/Patient Disclosure

- Thermography is non-contact, private, and non-invasive.
- It measures skin temperature patterns and provides information other tests cannot.
- Thermography does not replace mammography, ultrasound, MRI, or any other imaging.
- Thermography does not diagnose or treat any condition.
- An "Elevated Level of Concern" does not indicate suspicion for a specific disease.
- Any concerning finding will include a recommendation for further clinical evaluation.

For clients with a prior cancer diagnosis:

- Thermography evaluates temperature patterns only.
- It does not monitor cancer or disease progression.
- Ongoing follow-up and additional testing with your physician is strongly advised.

About your Thermographer:

- Your thermographer may not be a licensed medical professional.
- Your thermographer cannot interpret images, diagnose, prescribe, or give medical advice.
- Your thermographer may collect health history and provide general breast-health education.

By signing below, I confirm that I have read and understand this disclosure and consent to the thermal examination.
